## POWER Awareness

# Level 1 – An Entry Level Course

Share if you like it

## PUWER Awareness – **Level 1**

### **What is it?**

Start your PUWER learning journey with Spiers Engineering Safety. This training is appropriate for managers, supervisors and safety professionals looking for either **entry level** or **revision** of the principles of PUWER and machine risk assessment.

### **Who is it aimed at?**

This PUWER training course is recommended for all operations, maintenance, engineering, technical support and health and safety professionals involved in risk assessment and risk management, including leadership and management who are working with Machinery Safety.

This PUWER Training course is invaluable to any person or company looking to train for competency in PUWER inspection.

### **What are the learning outcomes?**

-  **Understand how PUWER 98 relates to the Health and Safety at Work Act** and other statutory requirements. There are many pieces of legislation that work together, at times overlapping, to form the legal landscape that machine safety exists within.
-  **Understand the PUWER 98 ACOP** and its intent with regards to safe machinery. The ACOP is 90+ pages but all the guidance should be taken in the context of the intent.

## What are the benefits?

-  By looking into the basic principles of PUWER, you will start to form a better understanding of PUWER regulations and how they relate to your work equipment
-  PUWER ACOP is over 90 pages long. By attending this course, you will learn how to use it and its intent with regards to safe machinery.
-  By attending Level 1, you will form a solid foundation to continue your PUWER training. Level 2 and 3 build on this knowledge, enabling you to make informed decisions within your safe machine processes.

## What do our delegates say?

*"We received a really good comprehensive explanation of PUWER and generally the standards which are applicable in our daily work. We are now competent to investigate further to improve our processes"*

**Balint Koszta - Design Rig Engineer, Dyson Ltd**
