PUWER Assessor Training - Level 2

What is it?

If you already have a basic understanding of PUWER, but wish to build on it with a practical element, then Level 2 training will be suitable for you. You may wish to attend the PUWER - Level 1 training first, or attend one of our [Machine Safety Workshops](#).

Who is it aimed at?

Typically this course is attended by engineers being asked to complete PUWER inspections as a part of their role. However, it can also be of great interest to managers, safety professionals and OEMs. This course can be adapted to focus on key issues or types of machine / work equipment.

What are the learning outcomes?

-  **Understand when a PUWER Inspection is required**, what the scope of inspection should be, and what the limits are when making changes to the machine.
-  **Use examples to complete a simulated inspection** of a machine including hazard identification.
-  **Complete risk estimation** individually and as a team.
-  **Apply a consistent rationale** on Reasonably Practicable vs. Practicable.
-  Dangerous moving parts are governed by 'where practicable' the rest of the ACOP is where 'reasonably practicable'. **We will show you what this means in practice** and some of the inconsistencies in comparison to the CE marking conformity process.

What are the benefits?

- By completing a simulated inspection, you will get a feel for carrying out a real PUWER inspection.
- Understand when to schedule in a PUWER inspection and WHY.
- You will be able to ensure that statutory requirements for inspection are met and that the risks on work equipment are identified and controlled in line with best practice and the law. This may avoid an accident in the future but will also provide evidence of systematic risk assessment and risk reduction which, in the event of a claim following an accident, would drastically reduce your company's contributory negligence.

What do our delegates say?

"All of the information given in the course was valuable, and the trainer was extremely knowledgeable and easy to understand. I will now ensure all equipment purchases comply with the CE directive"

James State, EHS Advsiior, Nitto UK

"The PUWER checklist and going through PUWER regulations were the most valuable things I will take away from this course. I want to instil PUWER into Nitto's work processes after attending this"

Yuichi Kimura, Deputy Manager of EMEA SAFETY, Nitto UK
